Objective

To gain a position where I can use my analytical skills, problem-solving abilities, and organizational talents to drive process improvements. To apply my expertise in supply, production, planning and analysis to develop effective strategies that improve operations and to ensure cost savings through strategic sourcing initiatives while meeting customer demands efficiently.

Experience

PROCESS ENGINEER FLEXO

UNIVERSAL FILMS SEP 2024 - PRESENT

- Created and maintained detailed production reports to track performance and efficiency.
- Optimized production processes for flexo printing, improving efficiency and reducing waste.
- Conducted process analysis and troubleshooting to identify and resolve production bottlenecks.
- Developed and maintained production schedules, ensuring timely and cost-effective delivery of print jobs.
- Managed the setup and calibration of flexo presses, ensuring optimal performance and minimal downtime.
- Collaborated with cross-functional teams (R&D, quality control, and maintenance) to streamline workflows and improve overall production quality.
- Utilized data analysis to monitor key performance indicators (KPIs) and drive continuous improvement initiatives.
- Trained production teams on process optimization techniques, safety standards, and best practices.
- Ensured compliance with company quality policies.
- Led root cause analysis for quality issues, implementing corrective actions that improved product consistency and customer satisfaction.
- Managed process documentation and reporting, tracking performance metrics, and supporting audits

PROCESS ENGINEER SLITTING PACKING & DISPATCH

KOMPASS PAKISTAN| AUG 2019- SEP 2024

- Lead a team of 75 team leaders' officers, staff, supervisors, operators, and technicians in the slitting Packing & Dispatch department.
- Coordinate production schedules to ensure timely product delivery while maintaining quality standards.
- Execute production activities efficiently to achieve consistent high-quality products and minimize customer complaints.
- Collaborate with engineering, procurement, and quality control teams to optimize production processes and address challenges.

- Provide leadership to enhance production efficiency, improve machine utilization, and boost team morale.
- Conduct monthly stock audits and review daily stock movement reports to ensure accurate inventory management.
- Analyze processes and compile de-bottlenecking studies to optimize production efficiency.
